Cresemba

Description

Cresemba (isavuconazonium)

Background

Cresemba belongs to a class of drugs called azole antifungal agents, which target the cell membrane of a fungus. Cresemba is used to treat adults with invasive aspergillosis and invasive mucormycosis. Aspergillosis is a fungal infection caused by Aspergillus species, and mucormycosis is caused by the Mucorales fungi. These infections occur most often in people with weakened immune systems (1).

Regulatory Status

FDA-approved indications: Cresemba is an azole antifungal indicated for use in the treatment of invasive aspergillosis and invasive mucormycosis as follows (1):

- Cresemba for injection: adults and pediatric patients 1 year of age and older
- Cresemba capsules: adults and pediatric patients 6 years of age and older who weigh 16 kilograms (kg) and greater

Cresemba is contraindicated in patients with familial short QT syndrome. Cresemba is also contraindicated when co-administered with strong CYP3A4 inhibitors or strong CYP3A4 inducers (1).

Specimens for fungal culture and other relevant laboratory studies (including histopathology) to isolate and identify causative organism(s) should be obtained prior to initiating antifungal therapy (1).

Hepatic adverse drug reactions (e.g., elevations in alanine aminotransferase (ALT), aspartate aminotransferase (AST), alkaline phosphatase, total bilirubin) have been reported in clinical trials. Evaluate liver-related laboratory tests at the start and during the course of Cresemba therapy. Monitor patients who develop abnormal liver-related laboratory tests during Cresemba therapy for the development of more severe hepatic injury. Cresemba has not been studied in patients with severe hepatic impairment (Child-Pugh Class C) and should be used in these patients only when the benefits outweigh the risks (1).

The safety and efficacy of Cresemba in patients less than 1 year of age have not been established (1).

Policy

This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.

Cresemba may be considered **medically necessary** if the conditions indicated below are met.

Cresemba may be considered **investigational** for all other indications.

Prior-Approval Requirements

Age IV injection: 1 year of age or older

Injection via nasogastric (NG) tube: 6 years of age or older **AND** weight ≥ 16 kg

Oral capsules: 6 years of age or older **AND** weight ≥ 16 kg

Diagnoses

Patient must have **ONE** of the following:

- 1. Invasive Aspergillosis
- 2. Invasive Mucormycosis

AND ALL of the following:

1. Laboratory and clinical documentation of causative organism(s)

Section: Prescription Drugs Effective Date: April 1, 2024

Subsection: Anti-infective Agents Original Policy Date: October 1, 2015

Subject: Cresemba Page: 3 of 5

2. Baseline liver function tests and monitored during the course of treatment with adjustment in dosing dependent on severity of liver function

Prior - Approval Renewal Requirements

Age IV injection: 1 year of age or older

Injection via nasogastric (NG) tube: 6 years of age or older AND weight ≥ 16 kg

Oral capsules: 6 years of age or older **AND** weight ≥ 16 kg

Diagnoses

Patient must have **ONE** of the following:

- 1. Invasive Aspergillosis
- 2. Invasive Mucormycosis

AND the following:

1. Liver function tests monitored during the course of treatment with adjustment in dosing dependent on severity of liver function

Policy Guidelines

Pre - PA Allowance

None

Prior - Approval Limits

Cresemba IV

Quantity 94 vials **Duration** 3 months

Cresemba Oral

Strength	Quantity
74.5 mg	470 capsules OR
186 mg	188 capsules

Section: Prescription Drugs Effective Date: April 1, 2024

Subsection: Anti-infective Agents Original Policy Date: October 1, 2015

Subject: Cresemba Page: 4 of 5

Duration 3 months

Prior - Approval Renewal Limits

Cresemba IV

Quantity 90 vials

Duration 3 months (One renewal only)

Cresemba Oral

Strength	Quantity
74.5 mg	450 capsules OR
186 mg	180 capsules

Duration 3 months (One renewal only)

Rationale

Summary

Cresemba is used to treat adults with invasive aspergillosis and invasive mucormycosis. Aspergillosis is a fungal infection caused by Aspergillus species, and mucormycosis is caused by the Mucorales fungi. These infections occur most often in people with weakened immune systems. The safety and efficacy of Cresemba in patients less than 1 year of age have not been established (1).

Prior approval is required to ensure the safe, clinically appropriate, and cost-effective use of Cresemba while maintaining optimal therapeutic outcomes.
