## Rezdiffra

## Description

## Rezdiffra (resmetirom)

#### **Background**

Rezdiffra (resmetirom) is a partial agonist of the thyroid hormone receptor-beta (THR- $\beta$ ) which is the major form of THR in the liver. Stimulation of THR- $\beta$  in the liver reduces intrahepatic triglycerides (1).

#### **Regulatory Status**

FDA-approved indication: Rezdiffra is a thyroid hormone receptor-beta (THR-β) agonist indicated in conjunction with diet and exercise for the treatment of adults with noncirrhotic nonalcoholic steatohepatitis (NASH) with moderate to advanced liver fibrosis (consistent with stages F2 to F3 fibrosis) (1).

Limitations of Use: Avoid use of Rezdiffra in patients with decompensated cirrhosis (1).

Rezdiffra may cause hepatotoxicity and gallbladder-related adverse reactions. Patients should be monitored for elevations in liver tests and for the development of liver-related adverse reactions. If hepatotoxicity is suspected, Rezdiffra should be discontinued and the patient should be monitored. Gallbladder diagnostic studies and appropriate clinical follow-up is indicated if cholelithiasis is suspected. If an acute gallbladder event is suspected, interrupt Rezdiffra treatment until the event is resolved (1).

Section: Prescription Drugs Effective Date: October 1, 2025

Subsection: Endocrine and Metabolic Agents Original Policy Date: August 9, 2024

Subject: Rezdiffra Page: 2 of 5

The safety and effectiveness of Rezdiffra in pediatric patients less than 18 years of age have not been established (1).

#### **Related policies**

#### **Policy**

This policy statement applies to clinical review performed for pre-service (Prior Approval, Precertification, Advanced Benefit Determination, etc.) and/or post-service claims.

Rezdiffra may be considered **medically necessary** if the conditions indicated below are met.

Rezdiffra may be considered **investigational** for all other indications.

## **Prior-Approval Requirements**

**Age** 18 years of age or older

#### **Diagnosis**

Patient must have the following:

Noncirrhotic nonalcoholic steatohepatitis (NASH)

#### **AND ALL** of the following:

- a. Moderate to advanced liver fibrosis (stages F2 to F3) as confirmed by **ONE** of the following:
  - i. Liver biopsy, performed within the last 6 months
    - 1. Nonalcoholic Fatty Liver Disease Activity score (NAS) ≥ 4 OR if NAS <4, hepatocyte ballooning and steatosis are present
  - ii. Elastography (e.g., Fibroscan), computed tomography, or magnetic resonance imaging within the last 3 months
- b. Patient has **THREE** or more of the following conditions that are managed according to standard of care:
  - i. Central obesity
  - ii. Hypertriglyceridemia
  - iii. Reduced high-density lipoprotein cholesterol (HDL)
  - iv. Hypertension

v. Elevated fasting plasma glucose (i.e., diabetes or pre-diabetes)

- c. Prescribed by, or in consultation with, an endocrinologist, gastroenterologist or hepatologist
- d. Used in conjunction with diet and exercise

#### **AND NONE** of the following:

- a. Stage F4 liver fibrosis (cirrhosis)
- b. Significant alcohol consumption (≥ 2 alcoholic drinks per day) for a duration of more than 3 months in the last year
- c. Diagnosis of hepatocellular carcinoma (HCC)
- d. Chronic liver diseases (e.g., primary biliary cholangitis, primary sclerosing cholangitis, Hepatitis B positive, Active Hepatitis C, etc.)

## Prior – Approval Renewal Requirements

Age 18 years of age or older

#### **Diagnosis**

Patient must have the following:

Noncirrhotic nonalcoholic steatohepatitis (NASH)

#### **AND ALL** of the following:

- a. Improvement in fibrosis by at least 1 stage within 1 year of treatment OR
  patient has had no worsening of fibrosis after 2 years or more of therapy
- b. Patient has not progressed to stage F4 (cirrhosis)
- c. Metabolic risks are managed to standard of care
- d. Used in conjunction with diet and exercise

#### **AND NONE** of the following:

- a. Significant alcohol consumption (≥ 2 alcoholic drinks per day) for a duration of more than 3 months in the last year
- b. Diagnosis of hepatocellular carcinoma (HCC)
- c. Chronic liver diseases (e.g., primary biliary cholangitis, primary sclerosing cholangitis, Hepatitis B positive, Active Hepatitis C, etc.)

Section: Prescription Drugs Effective Date: October 1, 2025

Subsection: Endocrine and Metabolic Agents Original Policy Date: August 9, 2024

Subject: Rezdiffra Page: 4 of 5

## **Policy Guidelines**

#### Pre - PA Allowance

None

### **Prior - Approval Limits**

**Quantity** 100 mg per day

**Duration** 12 months

## Prior - Approval Renewal Limits

Same as above

#### Rationale

#### **Summary**

Rezdiffra is a thyroid hormone receptor-beta agonist indicated for the treatment of noncirrhotic nonalcoholic steatohepatitis with moderate to advanced liver fibrosis. Rezdiffra may cause hepatotoxicity and gallbladder-related adverse reactions. The safety and effectiveness of Rezdiffra in pediatric patients less than 18 years of age have not been established (1).

Prior authorization is required to ensure the safe, clinically appropriate, and cost-effective use of Rezdiffra while maintaining optimal therapeutic outcomes.
